Technische Informationen

Our wall distributor "SMALL" is a compact power distributor which is delivered ready for use and wired.

During the production of the product, emphasis was placed on increased safety through high-quality protective switchgear and, as already mentioned, on professional wiring. All installed protective switching devices have a contact protection according to DIN VDE 0106 PART 100.

To protect against external influences, they are installed under a transparent and impact-resistant polycarbonate cover. Our covers are extremely robust, even at low temperatures, and have excellent heat resistance. All sockets are equipped with self-closing hinged covers made of impact-resistant polyamide 6.

To ensure weather resistance and strength for outdoor use, all external metal parts and cover screws are made of stainless materials and installed. ALL wired distribution boxes of the BRAND PUxl are unit-tested. We will send you a test report upon request.

Our products are verifiably MADE in GERMANY
